NOTICE TO BUILDING PERMIT APPLICANTS

An asbestos survey is required for all renovation, remodeling, repair and demolition of all interior and exterior building materials. As per NYS Industrial Code Rule 56, asbestos material must be abated by licensed contractors utilizing certified asbestos handlers, with the exception of owner-occupied single family homes, where the owner may remove the asbestos. However, it is not recommended that the owner remove asbestos. The owner could potentially expose themselves, their family and neighbors to asbestos fibers if correct engineering controls and work methods are not utilized during the abatement.
